

DevOps Adoption and Training

Fast Lane

AGILE RECIPE

The recipe for broadening Agile principles and revolutionizing technical workflow is clear.

Transforming IT capability from an unpredictable cost center to an Agile source of business value is about much more than just connecting Development to Operations. But along the way, the lessons of good development – agility, iterating, collaborating, strong teams – do come full circle to combine with proven tools and practices from the highest-performing IT operations teams.

DEVOPS TRANSFORMATION

A DevOps practice is built on a foundation of culture, tools, and structured collaboration. Cross-functionality of teams is critical, as is ongoing support from leaders and managers. Automation and high-efficiency tools support everything. Above all, the essential ingredient is the transformation in mentality of your IT teams from a focus on individual job roles to one of unified team mission. That transformation requires trust, new tools, and a tangible plan. It requires speed, high visibility, and an Agile mentality for everyone involved in developing, deploying and maintaining applications.

REAL-WORLD APPLICATIONS

Our DevOps training will teach you how to plan and execute the practices, tools, and skills that make true continuous operations possible in the real world. Rise to today's IT needs with a transformational blend of collaboration, automation, cultural tools, and real-world guidance. With our partnership with the nation's largest Agile development trainer, TechTown Training, comes a comprehensive program to get you started on the road to DevOps success. You will leave ready to implement fully-realized IT success in your own organization.

DevOps Training Offering

ADOPTION
